ISL Online's Cloud Computing Services to be Presented in the USA

SWINDON, England, /PRNewswire/ -- ISL Online, a leading provider of software for remote desktop access and support, web conferencing, and enterprise instant messaging, has been selected as one of UK's 12 most innovative companies delivering services based on Cloud computing technologies.

ISL Online is visiting Boston and Silicon Valley, 13 to 17 September, to showcase its software in the USA as a member of the UK Trade & Investment (UKTI)Cloud computing mission.

UKTI's ICT Sector Team and US Posts in Boston and Silicon Valley are organizing the event to promote business relations between leading UK Cloud computing companies and their US counterparts. ISL Online is among 12 of UK companies travelling to the two primary US ICT clusters to meet some of the major US vendors and network with industry executives.

The ISL Online network architecture is truly fault tolerant, including geographic load-balancing mechanisms, distributed session roaming, and is independent of the central server.

ISL Online is delivering its software as a service (SaaS) on a yearly subscription basis, as well as offering a lifetime Server License, which is installed and independently controlled within the client's organization. Moreover, ISL Online is the only provider in the market that enables its client companies to establish their own private cloud network by combining several servers into a corporate Internet communication network.
