The Ultimate Math and Reaction Game Arrives on the iPhone

HONG KONG, /PRNewswire-Asia/ -- Debug, an educational iPhone game developed by Mediaisms Limited, is now available on the Apple App Store. The game features fast paced game flow with a cute forest atmosphere challenging both the player's arithmetic skill and reaction time.

It is so simple to play Debug with fun. There are three different bugs in the game, which are beetle, bee and caterpillar. They represent 1, 2 and 3 points respectively. Starting the game, different bugs are shown on the tree. This scene will show up for a while and as the level progresses, the showing time is shortened to as extremely low as only 0.016 second challenging the ultimate reaction time of human eyes! The scene then switches to a formula view with a big question mark. The player has to tap the screen for exact times to answer the final result of the formula.

There are 2 game modes: Classic and Turbo. Beginners may try the Classic mode to get familiar with the game play. Turbo mode allows much shorter time for reaction and is designed for expert players who want more exciting gaming experience.

Consecutive correct answers can create a combo chain. This rewards player with bigger and bigger scores. High level of focusing is needed to achieve best scores and achievements. And players may compete with friends through Game Center or OpenFeint network. Debug is an attractive game for both adults and kids because all game characters and background are cute and lovely with colorful interface and sweet background music.
