ComNet Adds New North American Strategic Partner

ComNet has been approved by Code Blue of Holland, MI to supply fiber optic media converters and EoVDSL modems for use with their line of IP-Compatible phones and emergency call boxes. Code Blue turned to ComNet for their product quality, scope of products, ease of use, and level of customer support. These products are unique in that they are manufactured in the U.S. Code Blue joins the growing list of manufacturers to partner with ComNet to take advantage of their industry-leading technology.

“By approving ComNet, Code Blue will now be able to provide their customers with an easily implemented and reliable solution to extend the transmission distances of its products through fiber optic, coaxial cable, and twisted copper media. As many of Code Blue’s products utilize Ethernet for local and wide area network transmission, methods to extend transmission distances through legacy and newly deployed transmission media become a necessity”, stated Bruce M. Berman, ComNet Vice-President for New Business Development.

“Code Blue had been seeking a partner to provide a method of extending the usable distance between our devices, and ComNet proved to be the right choice for the solution”, said Mick Doran, Code Blue Product Development Manager.

Code Blue will now recommend the use of ComNet EoVDSL and fiber optic media converter products to their customers for use with their IP-based products.

Code Blue is located in Holland, Michigan. You may find additional information about Code Blue solutions at www.codeblue.com [1].
