Spectrum Control, Inc.

A Control Products & Systems Company

As a Control Products & Systems Company, we strive to meet our customers needs by providing greater component and system solutions to their design problems. Our family of interference, power and bandwidth control products is now the broadest line in the industry. These engineering driven products deliver unmatched performance in the high frequencies common in new applications.
In an effort to most effectively satisfy the varied requirements of the many markets we sever, we recently formed the Signal Products Group and the Power Technologies Group. This new structure will allow us to capitalize upon our unique engineering expertise, design and testing capabilities, and flexible manufacturing processes.

Signal Products Group

As a vertically integrated producer of ceramic capacitors and filters, we continue to provide the widest range of discrete EMI filters and filtered connectors. In addition, we have extended our ceramic technology to develop our SPECWAVE line of wireless components.
&#149Low Pass EMI Filters
&#149Filtered Terminal Blocks and Filter Plates
&#149Filtered Connectors
&#149Datacom Connectors
&#149Ferrite Connectors
&#149Ceramic ConnectorsBandpass Filters and Duplexers
&#149Patch Antenna Elements

Power Technologies Group

Several years ago, we began to apply our fundamental filtering expertise to improve power management. The result is a complete line of power products that ranges from off-the-shelf power components to power distribution units and remote management systems.
&#149Single Line Filters
&#149Filtered Terminal Blocks
&#149Power Entry Modules and Power Line Filters
&#149Multisection Filters
&#149Custom Commercial Assemblies
&#149SMARTstart AC/DC Intelligent Power Distribution Units
&#149SHARPstart AC/DC Power Distribution Units
