Kenwood 5x10 Series Automated Test and Alignment Program for the Aeroflex 3920

Automated Test and Alignment for Kenwood NEXEDGE Radios Soon to Follow

Aeroflex Incorporated announced today the release of the automated test and alignment capabilities for Kenwood radios on the Aeroflex 3920 Digital Radio Test Set for the 5x10 Series of mobiles and portables.

The Aeroflex Automated Test and Alignment procedure provides fully automated test and alignment of Kenwood radios without the need for user interaction. This test system ensures consistent and reliable tests and alignment to manufacturer recommended specifications and to industry standards, ensuring proper interoperability and a uniform standard of performance within the radio's network.

"With the wide deployment of the 5x10 Series of Kenwood two-way radios, particularly in the public safety community, we expect that the additional capabilities on the Aeroflex 3920 Digital Radio Test Set will be rapidly accepted," said Shelley Sanders, Marketing Manager, Kenwood U.S.A. "We're pleased that our continuing alliance with Aeroflex has again produced a new release that provides outstanding value to the market."

"Aeroflex is pleased to release this unique test technology for Kenwood radios," said Rob Barden, Director of Product Marketing, Aeroflex. "The 3920 provides an advanced method for repeatable and highly accurate test and alignment for Kenwood radios that requires minimal technical interface. Since the 3920 provides fully automated tests and alignment processes, Kenwood dealers and end users can now utilize their technical resources to provide higher value services."

Availability

Delivery for the Kenwood 5x10 Auto-Test II Option is expected in March 2012.

Existing 3920 users can order part number 390XOPT608. The Aeroflex 3920 has a delivery time of 6-8 weeks upon receipt of order.
