CML Microcircuits Expands its Engineering Department

CML Microcircuits

CML Microcircuits has announced the further expansion of its engineering department.

CML Microcircuits [1] (UK) Ltd has established a new specialist RF and mixed-signal semiconductor design team in Sheffield, England, that will operate as an extension of its existing Essex based design team.

The move will allow CML to accelerate the design and release of new products into the market.

RF has been a recent focus for CML. This new design team builds on existing foundations and will enable CML to address new opportunities in higher frequency wide band systems. CML also expects to utilise this addition of new design engineers to further its planned and existing research activities.

Managing Director, Mike Gurry said "I am delighted to announce the expansion of our engineering resource. Adding this talented group of engineers to our design team will enhance our capability to meet our stated objective to define, develop and deliver high-quality, innovative semiconductor solutions to our customers".

The new teams skill base will complement and enhance CMLs capability with regard to both design experience and addressable markets.

If you would like further information about CML Microcircuits please visit our website www.cmlmicro.com [1].

Benefits of the expansion

- Larger Engineering Resource.
- Complimentary to existing teams while adding additional strengths and experience.
- Enabling the development of more products serving different areas.
- Allowing further research activity for future product innovation.
