UK Made Custom RF Connectors Delivered in 7 Weeks

Intelliconnect, the UK based manufacturer of RF connectors, offers one of the widest ranges of standard Coaxial, Triaxial and Waterproof connectors available worldwide. In addition, their extensive design experience and UK sourced components allows Intelliconnect to offer an unrivalled custom connector design service.

Custom designs take many forms; from the modification of a standard product to provide bespoke termination, extended operating frequency range, special plating or different case material (such as stainless steel) through to a completely new design as with the Intelliconnect ABMS connector for cochlear implants.

Turn round time for delivery of a custom designed product from Intelliconnect is a remarkably short 7 weeks from the customer's approval of the design drawing, no matter how complex. Such is the confidence that Intelliconnect can fulfil all of their customer's requirements satisfactorily no design or NRE (non-recurring engineering) charges are requested and no MOQ (minimum order quantity) is required. Intelliconnect are also happy to provide free prototypes when the first production order is placed.

"We have a vast amount of connector design experience in our engineering department." Comments Roy Phillips, Managing Director of Intelliconnect Europe. "Using UK sourced components and manufacturing at our Essex based factory enables us to offer very attractive lead times, exceptional customer service and competitive pricing for high volume requirements. From the beginning Intelliconnect set out to offer high quality UK manufactured RF connectors which not only meet

our customer's technical requirements but also their manufacturing system's requirements. Reliable component supply and on-time deliveries are more important now than ever, UK sourced components and manufacture mean we can support our customers with a full JIT and Kanban service."

Intelliconnect manufactures a wide range of standard and custom RF connectors including the market leading Pisces waterproof series. They also manufacture a large range of coaxial adaptors, to facilitate inter-series connection and gender change etc., and connector and cable assemblies to customer specific requirements are also undertaken. Typical applications include marine, oil and gas, medical, defence and general microwave markets.
