

Perform quality control testing and defect tracking from virtually any location with Genilogix QC Mobile

PITTSBURGH, /PRNewswire/ -- Genilogix announces that the next revolution in quality control, QC Mobile, is now available for download via the Apple App store. Genilogix QC Mobile allows quality professionals to run application testing through HP Quality Center from virtually anywhere -- simply, quickly, and even on the go.

Using Apple iPads, iPhones, and/or iPod touch mobile devices running Genilogix QC Mobile, development and quality professionals can perform tests, track defects, and transmit electronic test data wirelessly. Genilogix QC Mobile seamlessly integrates with HP Quality Center, a market-leading quality-management software platform.

Wherever the testing may be performed - validating product testing on a manufacturing factory floor, reviewing the process workflow for a distribution warehouse, conducting user acceptance testing at a client location, or out in the field confirming the maintenance and operation of a machine - chances are that the resulting information is entered by hand on to a clipboard form that is populated into a proprietary application for statistical analysis. Remote testing combined with access to HP Quality Center via Genilogix QC Mobile leads to increased productivity, efficiency, and accuracy by replacing a manual paper process with automation on a hand-held device.

"Genilogix QC Mobile addresses environments where mobility is a critical component for testing and defect tracking," said Nate Stuyvesant, CTO of Genilogix. "Certain verticals like manufacturing, healthcare and life sciences, hospitality, and telecommunications are now able to extend the workflow and reporting capabilities of HP Quality Center beyond software testing to handle processes like quality control, and inspections."

"As business demands grow and organizations are challenged to accelerate the automation of key business processes, agility and quality become increasingly critical," said Jonathan Rende, vice president and general manager, Business Technology Optimization Applications, Software and Solutions, HP. "The integration between HP Quality Center and Genilogix QC Mobile gives organizations the flexibility to drive both quality and speed in the field and in the development labs."
