

Turn Your Smartphone Into a Rugged Camera With This G-Form Case

Anita Li

[Smartphones](#) [1] and extreme sports are natural enemies, as bringing your prized [iPhone](#) [2] on that mountain-biking trip is a surefire way to get it lost or broken.

For this reason, thrill-seekers have often turned to [GoPro](#) [3] for action cameras that can capture footage while on-the-go. But one company is challenging the status quo by developing a case that it says can turn a standard smartphone into a rugged camera.

G-Form, which creates protective cases for tech gadgets, has unveiled the G90 Action Sports Camera for the [iPhone 5](#) [4], the latest [iPod touch](#) [5] and other devices. Check out the video, above, for more.

"The G90 case integrates unique, multiple proprietary and patent-pending technologies allowing smartphones and iPods to be flat mounted as extremely low profile, aerodynamic and sleek as sports action cameras," [the company said on its website](#) [6].

G-Form's GoPro alternative will be available starting this June.

Would you use the G90?
