

# Yolo Is Intel's First Smartphone for Africa

Stan Schroeder

Chip maker [Intel](#) and mobile operator Safaricom have announced the Yolo, the first smartphone for the African market with an Intel processor

Intel claims the Android device is aimed for "cost-conscious and first-time buyers in Kenya," but its specifications aren't as shabby as that characterization might imply. It's powered by the Intel Atom Z2420 processor which can reach speeds of up to 1.2GHz. It also comes with a 3.5-inch touch screen, a 5-megapixel camera with full HD video capture support, FM radio and HSPA+ support
