DC Power Breaker Interface Panels

Spectrum Control's Advanced Systems Group has introduced a new line of DC power breaker interface panels as an addition to its line of AC/DC power distribution units and remote management systems. These new interface panels are custom designed with standard modules to meet specific customer requirements for high current DC power distribution and multi-breaker buss bar applications. The Spectrum Control DC power breaker interface panels can incorporate a variety of design features including high or low voltage cut–off protection, EMI noise suppression, and individual position monitoring and control with selectable current protection. The panels also feature remote reset breakers and power sharing/power shedding capabilities.
