

Testmate Cable Assemblies

Times Microwave Systems has recently introduced its line of flexible 50 Ohm Testmate cable assemblies. Designed for operation up to 18 GHz or 40 GHz, Testmate cables have a proprietary triple shielding system and several designs feature interchangeable connector heads. Testmate cable assemblies have low attenuation, long term electrical stability and are ruggedized for daily dependability in a wide range of applications including site/field testing, test labs, production line testing, quality/maintenance testing and fixed RF system interconnects.
