Triaxial Relay

The Matrix Systems 7900 series is a Triaxial Pair Relay available in sizes ranging from 2-24 throws. It features DC up to 800 MHz depending on the number of throws, low EMI, and low VSWR. Applications include switching MIL-STD-1553 bus signals, routing ECL and audio pairs, low noise and level switching using driven shield techniques, and very low leakage current measurements using semiconductor parameter analyzers. These modules are available with RS-232.
