

Ceramic Chip Trimmer Capacitors

New 9344 series ceramic chip trimmer capacitors from Johanson Manufacturing are economical single-turn, ceramic dielectric capacitors designed for high volume commercial applications. These surface mount trimmers are small in size, and their construction allows them to be used in applications where reflow soldering is part of the manufacturing process. The series is available in five capacitance ranges from 1.7 to 3.0 pF to 5.5 to 30 pF. They have a working voltage of 100 V DC and an operating temperature range of -55°C to 85°C . The capacitors are packaged 1000 pieces on a 7 inch reel.
