

Modular Jack with Ferrite

The ferrite RJ45 is the latest release from Kycon's line of ferrite connectors. The 0.492 high modular jack is available with either short or extended shield for further EMI/RFI improvements, and also with or without 12° angled grounding flaps. The body comes in black PBT with tin plated copper alloy shielding. The contact material is phosphor bronze with 50u gold plating over nickel on contacts and selective gold plating on contact area.
