

## Desktop Wireless LAN Conversion

Elan's latest PC Card Adapter, the P111, enables Wireless LAN PC Cards to be used with existing desktops, and avoids laptop expenditure in setting up a LAN network. Offering guaranteed compatibility with all current hardware and software platforms, the P111 connects simply and easily to the computer's PCI board and auto-installation software comes free with the unit. Successfully tested with all major makes of Wireless LAN PCMCIA cards, the versatile P111 unit also accepts 32 Bit CardBus cards and any other PCMCIA standard cards. Once installed the Wireless LAN card can be hot swapped, plus a smooth operating ejector button eases insertion and removal of PC Cards into the rear expansion slot. The low cost unit is set to become a popular choice for users wanting flexibility without having to invest in new PCs, as well as for Systems Integrators who need to future-proof their solutions.

The P111 is the latest addition to the Elan P-Series range of PC Card to PCI Adapters awarded an international Patent in 2000. The full range offers a variety of models of PC Card Read/Write drive units for internal or external mounting. Elan also provides a wide range of special interface PC Cards, card peripherals and software, and offer design services for new PC Cards which are custom designed to supplied specifications in small quantities. For full details of the Elan range visit the Elan Website at [www.pccard.co.uk](http://www.pccard.co.uk)
