

Induction Cap Sealing System

Enercon's Super Seal[®] Series recently added the Super Seal Deluxe. This new system features microprocessor control and an advanced sealing head design to maximize performance. Operation is guided by the microprocessor which is specifically designed to control, monitor, and display all critical performance, inspection and operational data. For ultimate control an optional RS485 interface is available as a powerful link to a process computer. The system also incorporates built-in functionality for cap inspection, eliminating the need for an additional control box.

Super Seal Deluxe outstanding features include a user-friendly operator interface. Microprocessor control operator interface is intuitively designed so that even first time users can operate the system. The 2 line by 40 character display provides all critical performance, inspection and operational data.

Customized sealing heads with productive quick-change design are also included in the system. Enercon has engineered an assortment of sealing heads to meet the specific demands of a variety of package configurations and packaging operations. Our new quick change sealing head design makes changing sealing heads fast and easy.

The Super Seal Deluxe is ideal for any packaging environment and its NEMA 4 cabinet is safe for wash-downs.
