N-Type Attenuators

MECA's compact 611 series N-Type coaxial attenuators cover all commercial wireless bands from DC - 2 GHz and are available in attenuation values from 0 - 20 dB in 1 dB increments. Standard attenuation values of 3, 6, 10 and 20 dB are in stock ready for immediate shipment; delivery of other values is stock to 2 weeks.

These attenuators dissipate 2 watts max average RF/Microwave power (2 kW peak) and feature nickel plated brass connectors, silver plated contact pins and virgin electrical grade Teflon insulation within the connectors.

N-male to N-female connector configuration is standard. Also readily available are male-male and female-female configurations that eliminate the need for connector adapters that add loss and uncertainty to your critical applications such as extending the dynamic range of power meters and amplifiers.
