

Ceramic Trimmer Capacitor Line

TUSONIX ceramic trimmers are offered in a variety of styles and capacitance ranges and mounting configurations. The Tusonix 528 and 538 trimmers, which are all ceramic construction with optically flat interfaces, use nonferrous and silver-plated terminals and other metal parts to provide conductivity and problem-free soldering.

The 518 trimmer occupies less than .007 cubic inches of space yet exhibits the ruggedness and capacitance range of a unit many times its size. And, the 513 trimmer — a surface mount version available on tape and reel — is 5 mm in diameter by 2 mm high and is ideal for a wide range of applications that require miniaturized capacitance trimming.
