

AeroComm

RF Help Guides

AeroComm introduces four new RF help guides, "Wireless Myths." Aimed at those involved with the selection, purchase or design of wireless systems for OEM applications, the four free lit pieces will offer advice concerning equipment selection, standards, interoperability, approvals and more. As their names suggest, the guides dispel a number of popularly held beliefs and "myths" surrounding the subject of short distance wireless transmission at 2.4 GHz. In addition to these four topics, AeroComm plans to continue publishing educational pieces to solve confusion about security, sensitivity, etc.
