Bench Top Tester

The OS-32 Automated Continuity Test System is a self-contained, auto programming test system that gives fast results of shorts and open circuits used to verify the integrity of IC package bond wires, bare and assembled PCBs, and short cable assemblies — instantaneously. The OS-32 system provides 16-bit accuracy on both the source and measurement and fast measurement switching on up to 1000 pins ensuring accurate performance and complete electrical continuity testing on all internal connections.
