

## Bluetooth Development Bundle

This offering combine's Oki's BQB certified Bluetooth module and Module System Development Kit (BT-MSDK) with BQB certified software stacks and a variety of sample applications from Oki's partner, Open Interface. With this bundle developers can decrease their evaluation time, while lowering their risk and increasing their time to market. The Bundled Bluetooth offering consists of Oki's BT-MSDK, MK70120 module with antenna, and complete upper stack from Open Interface. In addition, customers receive a host of sample applications such as headset, printing and file transfer programs. The evaluation software allows them to decide which software best fits their needs, and proceed directly into the development stage. The BT-MSDK includes multiple interfaces, built-in software and a dedicated Evaluation Tool for evaluating and verifying data communication with the Bluetooth target system.
