

Broadband Wireless Components Catalog

REMEC Broadband Wireless announces a new 132-page product catalog for microwave components. This catalog provides applications information on REMEC products, including detailed data sheets on REMEC mixers, VCOs, and microwave frequency sources for commercial telecommunications, instrumentation, defense, and space applications. The catalog also provides company background information and application notes with information on selecting and using miniature microstrip and surface-mount mixers. Over 100 mixer models are described. The VCO section includes tuning characteristics, tuning speed, phase noise, pushing, supply voltage, spurious, and harmonics.
