

SMD Inductors

The DR349 Series SMD inductor features low seated profiles from 0.095 inches (2.4 mm) maximum to 0.198 inches (5.3 mm) maximum above the circuit board and operates over the temperature range of -150°C to $+80^{\circ}\text{C}$. The DR349 Series SMD inductors combine high-performance and dependability for high frequency filter applications. The series also offers an inductance range from 10 H to 220 H, a resistance of 0.13 ohms to 21 ohms maximum and a maximum rated current from 50 to 1800 mA. The DR349 Series is compatible with high-speed pick-and-place assembly and high temperature soldering equipment.
