

Backplanes

Schroff offers a series of CompactPCI backplanes that provide features such as bridging multiple backplanes together. Other standard features include rear I/O on both 6U and 3U versions. These backplanes are suited for 19 inches applications requiring high availability in a compact design. The backplanes are PICMG 2.0 R3 compliant, with hot-swap capability and are available from 2 to 8 slot versions. They may be mounted side-by-side, without the loss of any slots, using the Schroff-bridge located under the rear I/O boards. The backplanes and the bridge operate at up to 66 MHz.
