## Horn Antennas

Schaffner EMC introduces a double-ridged guide horn antenna that offers a frequency range of 1 - 18 GHz. The BHA 9118 is a linearly polarized, broadband antenna used for both receiving and transmitting in chambers or open area test sites. The antenna has a field strength capability of 250 V/m at 1 m, and a high typical gain of 5.5 - 15 dBi. The antenna has a mounting bracket with a 1/4 inches camera thread hole.
