

Wireless Data Communication Standards: 802.11, 802.15, and 802.16

A three-day UC Berkeley Extension course which presents all wireless data communication standards developed by the IEEE-the 802.11 standard for wireless local area networks, the 802.15 family of standards for wireless personal area networks, and the 802.16 standard for broadband wireless access systems. The course is intended for engineers and engineering managers who are involved or are likely to be involved with the development of products or technology, or providing services using wireless technology.
