

Integrated Development Environment

Metrowerks introduces CodeWarrior[®] Development Studio for Sharp Zaurus Application Development, Version 1. The integrated development environment (IDE) allows developers to author code on a Windows operating system desktop and then deploy applications directly to the Sharp Zaurus device. Developers can choose to write applications in Qt, a multi-platform C++ application framework, Java 2 Platform, Micro Edition (J2ME[®]), and other standard programming languages. This allows applications to integrate into existing enterprise systems. The development suite includes a GNU compiler, linker and assembler utilities within the Trolltech Qt[®] Designer, the CodeWarrior Debugger for ARM[®] architectures, and the Cygwin[®] environment.
