

## Field Bus Connectors

ERNI announces cage clamp connection options for its ProfiBus and CanBus series field bus connectors. The connector contains a latching spring clip, which makes for easy, quick connection &#151; open the clip, insert the wire or stranded core, and close the clip. The range of cross sections from 0.14 to 0.5 mm gives the user a choice of cable to use. The portfolio includes types with switches (switch-in matching resistor) and versions with simple nodes and connections for reliable use in field-bus systems. Versions with horizontal (0° or 180°) or vertical cable outlets are available. Slim-line versions in metal housings, or an additional programming interface, can also be provided.
