

## EDGE Network Products

Sierra Wireless introduces the AirCard 775 PC Card and the MP 775 GPS modem for EDGE networks. About the size of a credit card, the AirCard is an EDGE multi-slot Class 12 PC Card and is suitable for mobile professionals who are heavy data users, allowing them to send data at speeds averaging between 100 and 130 kbps, with bursts up to 216 kbps. The quadband design (850/900/1800/1900 MHz) also enables global roaming on both EDGE and GSM/GPRS networks. The MP 775 GPS is a rugged vehicle mount modem that operates in extreme temperatures and meets US Military and SAE J1455 specifications for vibration, shock, and humidity. The product, built for demanding environments and worldwide connectivity, is suitable for public safety, transportation, and field service industries.
