

GSM Module for WLL

Wavecom introduces the WISMO Quik Q2400, an entry-level solution adapted to the needs of wireless local loop (WLL) and machine-to-machine applications. The GSM protocol stack allows manufacturers to benefit from hands-free audio, multi-call management, and MMI interfaces such as LCD and keypad, on networks worldwide. The Reference Design Package which includes the Q2400 module plus a complete hardware reference design and reference software features. For a customized solution, manufacturers of fixed wireless can use Wavecom's Open AT toolkit to create their own user interfaces and embed them directly on the Q2400 module.
