

Simulation Software Tool

Ansoft releases HFSS v9 for the Sun Solaris® and HP/UX 64-bit operating systems. HFSS v9 for UNIX(R) provides a number of larger installations with continued support for existing clusters of high-end UNIX 64-bit compute servers. The software tool provides cross-platform support between UNIX and PC hardware, enabling a mixed environment of compute hardware within a single corporate network. The software includes a variety of training materials, such as getting started guides and a multimedia training CD.
