

Lamps and Drivers

Rogers introduces their newest electroluminescent (EL) product lines, manufactured by its Durel Division. DUREL DFLX lamps offer designers versatility for low-cost, uniform keypad lighting, including the ability to provide many types of decorative lighting. DFLX lamps are very thin (0.1 mm) as well as flexible because of the absence of the polyester film associated with conventional EL lamps. These versatile EL lamps are used in mobile phones, remote controls and other electronic devices with keypads. The thin profile of DFLX lamps fits easily between an assembly metal dome array and the keypad.
