

Portable Oscilloscopes

Agilent introduces four 100 MHz portable digital storage and mixed-signal oscilloscopes (DSOs/MSOs). With a real-time sample rate of 2 GSa/s on each channel and fast display update rate, the Agilent 6000 Series can now show critical events in complex waveforms. The additions to the 6000 Series provide a 4+16-channel MSO in the 100 MHz segment. These oscilloscopes feature waveform viewing and measurement insight for 8- and 16-bit embedded system designers in the aerospace/defense, automotive, communications and consumer electronics industries. Waveform viewing is achieved with Agilent's MegaZoom III display technology.
