Surface Mount Power Inductors

TT electronics and BI Technologies Magnetic Components Division develops a family of surface mount power inductors in four low-profile package types. Designated the HM62 Series, the inductors exhibit high self-resonant frequencies up to Q value. All inductors in the HM62 Series family feature an operating temperature range of -40°C to +85°C. The inductors are offered in both shielded and non-shielded packages www.bitechnologies.com 714-447-2571
