

## Uni-Matic Epoxy

The Uni-Matic epoxy preform loader, available through Multi-Seals, Inc. provides an cost-effective method for loading high volumes of epoxy preforms. -->

The Uni-Matic epoxy preform loader, available through Multi-Seals, Inc. provides an cost-effective method for loading high volumes of epoxy preforms. Depending upon component and preform geometry, the Uni-Matic feeds at rates of 200 to 600 preforms per minute with little or no operator training. The loader incorporates a vibratory bowl and gravity in-line track with escapement. It is suited for switches, connectors, EMI/RF filters and other components with prominent terminals. The Uni-Matic may also be used as a sub-component to a fully automatic feeder system for streamlining in-house sealing production.
