

Home Networking System Uses UWB Chipset

Pulse~LINK introduces its CWave wireless HDMI system that enables the placement of an HDTV anywhere in the room, reducing the accumulation of connector wires behind entertainment systems while establishing a secure wireless connection between the HDTV display and multiple entertainment source devices such as video game consoles, DVRs, Blu-ray DVD and HD DVD players. CWave UWB-Over-Coax solutions for HDMI, Ethernet and 1394 connectivity allow content stored on any device in the home to be networked to any HDTV in the home across the existing in-home coax cabling. Gigabit data rates and guaranteed quality of service enables multiple streams of high definition content to be shared throughout the home for room-to-room digital home cinema experience.
