

Signal Analyzer Offers Increased Performance

Agilent Technologies, Inc. announces enhancements to its X-Series signal analyzers which deliver speed and scalability. The series includes the proprietary EXA and MXA signal analyzers and application-specific measurement solutions, including EDGE evolution and LTE MIMO. The upgraded EXA delivers 25 MHz analysis bandwidth. The MXA has Dual MIMO, which brings the latest in two-channel LTE FDD analysis technology to the test bench. With an all-digital IF and pre-Amps up to 26 GHz, the MXA provides high accuracy in a mid-range analyzer and measurement speed, enabling improvements in throughput and yields in manufacturing test.
