

## AC/DC Adapters Target Medical Applications

Emerson Network Power releases its DA12-M series of wall-mount switching adapters for medical and information technology equipment (ITE) applications. These high-density, single output power adapters are capable of delivering 12 V at 12 W total power, and they feature a slim form factor, enabling the use of multiple adapters in dual wall outlet configurations. These switching adapters are suitable for non-patient contact and non-patient critical medical and dental devices, and they feature universal 90 to 264 V AC inputs in 4 AC plug configurations (U.S., UK, EU and AU models), each specifically suited for the region of the world in which they will be used. All 4 adapter configurations meet stringent Level V efficiency standards, and are fully-certified by Energy Star 2.0 and CeC approvals.
