

## **Solar Components Places Initial Manufacturing Order for its Joos Orange™ Portable Solar Chargers**

CAMPBELL, Calif., /PRNewswire/ -- Solar Components™, LLC recently announced that it has placed its initial manufacturing order for its Joos Orange™ portable solar chargers with Singapore-based Eastern Asia Technology Limited, one of the leading Original Equipment Manufacturers in the world for consumer electronics devices.

Solar Components now plans to begin shipping its much-anticipated Joos Orange portable solar chargers during the third quarter of 2010.

"We recognize that we turned the personal solar charging market on its head with our first Joos Orange announcement back in March," said Jamie Bullen, CEO and co-founder of Solar Components.

"We know there's nothing like the Joos Orange on the market today: a portable solar charger priced at under \$100 that works on sunny days and cloudy days, in partial sunlight, in the rain, under water and even after being shot five times by a .22 caliber rifle."

The Joos Orange from Solar Components sets a new standard in "Personal Solar Appliances" by delivering more than 2.5 hours of cell phone talk time for every hour of charging time - up to 20 times (20x) the powering capability of existing personal solar power devices.

Available in June 2010, the Joos Orange measures 5.8" x 8.6" x 0.8", weighs 24 ounces and has a suggested retail price of \$99.95. <http://www.solarjoos.com/>  
(NOTE: Joos is pronounced like the word "juice.")
