

Precision Adapters Are Designed for Low Insertion Loss-VSWR up to 18GHz

RF Precision Products has released a complete line of the most popular test adapters covering SMA and N-types. Precision machined passivated stainless steel construction for long life, repeated use and corrosion resistance. All adapters feature epoxy captivated components and are designed for outstanding electrical performance with low loss and guaranteed low VSWR to 18 GHz. N to SMA adapters are suitable for use with the Anritsu Site Master line of test equipment and other similar popular brands.
