

Skyworks Introduces Differential Attenuator

WDD Staff

Skyworks Solutions (Woburn, MA) unveiled a new device for cellular infrastructure, VHF/UHF military and public safety radios. The SKY12408-321LF is a 6 dB differential attenuator that is pin-for-pin compatible with its 12 dB SKY12407-321LF attenuator, but ideal for IF radio applications requiring lower overall attenuation and gain control. Features include:

- 50-600 MHz.
- Novel differential I/O design.
- Fast settling time for applications that down convert to a low Intermediate frequency.
