

# Marlow Introduces Thermal Management for Industry

WDD Staff

[Marlow Industries](#) [1](Germany)

has announced the Climatherm range of Air to Air heat exchangers. The new Climatherm range of Air to Air heat exchangers from Marlow brings increased heat power transfer while remaining within the industry standard footprint. These powerful assemblies with high COP need only to be mounted into the application and connected to electrical power via the supplied lead and connector. Using low noise fans and solid state heat pumping, minimal vibration, and long life are also key aspects that make these suitable for a broad range of applications. Additional features include:

- 12, 24 & 48V DC voltages.
- Heat pumping capacities from 75 to 245W.
- RoHS and EU compliance.
