

BodyCom Technology

Microchip Technology Inc.

Framework provides short-range, low-data-rate communication solution for securely connecting to wide range of wireless applications.

[Microchip Technology Inc.](#) [1] has announced from the Embedded World conference in Germany its BodyCom technology, which provides designers with the world's first framework for using the human body as a secure communication channel. Compared to existing wireless methods, BodyCom technology provides lower energy consumption, while further increasing security via bidirectional authentication.
