

HotSpot Episode 20: Fly Personalized Spacecraft to the Moon

Eric Sorensen, Coordinator of Multimedia Development

This week on the WDD HotSpot, brought to you by [Memory Protection Devices](#) [1], we feature:

- To help understand and try to control heart disease, [Qardio](#) [2], a healthcare company, has unveiled two cardiovascular monitoring devices for those who may be at risk, the QardioCore and QardioArm.
- The [Bitponics](#) [3] personal gardening assistant system allows users to manage a garden from any Web browser.
- British Airways is preparing to experiment with [new electronic bag tags](#) [4] that allow users to hold their smartphone over the tag to scan a unique barcode that contains flight details.
- The [Pocket Spacecraft](#) [5] are small disks with flexible electronics that consumers can track via their own Pocket Mission Control App. The project is currently seeking funding on crowd-funding site, Kickstarter.com.
